EDUCATION

National Institute of Technology , Jalandhar

B.Tech in Instrumentation & Control Engineering, Minor in Computer Science — GPA: 8.0/10

Punjab, India

2024 – 2028

TECHNICAL SKILLS

Core CS: DSA, DBMS, Operating Systems, OOP, System Design

Languages: C++, JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express.js, FastAPI, Socket.io, REST APIs, JWT, RBAC

Frontend: React.js, Next.js , Tailwind CSS, Redux Toolkit, Framer Motion

AI/ML: LangGraph, Agentic AI, RAG, OpenCV, SHAP, Scikit-learn, TensorFlow, Keras

Databases/Cloud: PostgreSQL, Prisma, MongoDB, MySQL, Firebase, Redis, AWS S3 , AWS EC2 , NGINX

Developer Tools: Git, GitHub Actions, Postman, Swagger

EXPERIENCE

VaniAgent (Solvea Technologies) 🌐

Mar 2026 – Present

Full-Stack AI Intern

Remote

- Built **LLM-powered EdTech workflows** using custom system prompts, enabling chatbot conversations, multimodal file/image processing, and AI-driven presentation generation for real-time educational assistance.
- Enhanced backend performance using Redis caching, asynchronous scraping pipelines, and scalable architecture improvements, reducing API response latency during concurrent usage.
- Developed an AI voice agent using LLM function-calling pipelines, enabling real-time speech interactions, API execution, and conversational task automation.
- Built **blog.vani** 🌐 🌐, a full-stack **Next.js 16** (App Router) content platform architected on HubSpot's blog engine, implementing hand-rolled **JWT authentication** in httpOnly cookies and a **four-tier editorial RBAC** system (Viewer/Author/Editor/Admin) backed by MongoDB/Mongoose.

Centre for Training and Placement, NIT Jalandhar 🌐

Aug 2025 – Present

Full-Stack Developer

Jalandhar

- Developed a **MERN-based Faculty Dashboard** automating recruitment workflows for **100+ companies**, improving administrative efficiency and placement operations.
- Implemented secure **JWT authentication**, **RBAC-based authorization**, and protected APIs to ensure scalable and role-based access control across the platform.
- Streamlined MongoDB aggregation pipelines, reducing query latency by **80%** and improving dashboard performance for high-volume placement data.

Xceed - Official NITJ Web Dev Club 🌐

Aug 2025 – Present

Backend Developer

Jalandhar

- Designed modular Express.js services and reusable backend controllers to scale registration systems for **6,000+ students**, maintaining **99.9% uptime** during high-traffic event registrations while reducing code redundancy across concurrent workflows.

PROJECTS

iT1DXpert | *Express, Prisma, PostgreSQL, React (Vite), LLM API Integration* | 🌐 🌐

Jul – Aug 2026

- Engineered a multi-tenant Type 1 diabetes care platform in collaboration with an NITJ faculty member and PGI Chandigarh, implementing **four-tier RBAC** (Super Admin, Hospital Admin, Doctor, Patient) with hospital-scoped tenancy middleware enforced at the query level across **18+ relational models**.
- Integrated a multimodal **generative AI (LLM) API** to power a multilingual (English, Hindi, Punjabi) care assistant with voice input and document/log OCR extraction, and built a **React (Vite) + Tailwind SPA** with **Recharts**-based glucose-insulin dashboards and real-time alert/appointment modules for doctor-patient coordination.

SmartDocs | *MERN, OCR, MongoDB GridFS* | 🌐

Jan 2026

- Developed an AI-powered document digitization platform achieving **94% OCR accuracy** using asynchronous OCR processing pipelines with Tesseract.js.
- Implemented scalable **MongoDB GridFS** storage handling **500+ binary assets** with optimized file retrieval workflows.

ACHIEVEMENTS

- State Representative** for OpenAI Hackathon; SIH internal round shortlisted.
- Secured 11th place** in the MLSC Hackathon at Thapar Institute among 800+ participating teams.
- GSSOC'26 Contributor and Mentor** for AI Agents and Open Track.
